

Molafos[®] 20 Pasture Supplement

Molafos 20 is a palatable supplement with 20% protein that is high in Molasses (Energy) with a low urea level and balanced minerals. It is significantly more palatable than Molafos 20 SS.

Molafos 20 Uses

- ✓ A dry feed / drought supplement to grazing cattle, sheep and goats on mature pasture, stubble or forage crops.
- ✓ Fed as a production supplement starting early in a dry season while there is a good body of forage available.
- ✓ A supplement for backgrounding cattle to get stock onto feed sooner and as a post-weaning supplement with hay and or grain for calves and lambs.
- ✓ Can be medicated with Monensin, Lasalocid or Flavophospholipol to improve feed efficiency.
- ✓ Has the option of increased Phosphorus levels.

SUITABLE FOR SPECIES   

SUITABLE FOR CATEGORIES: Breeder, Weaner, Maintenance, Grower, Production, Backgrounder

Molafos 20 Features

- Unique Molafos feed system. Excellent carrier of minerals, vitamins, supplements and medications.
- Economical and with a balance of protein, energy and minerals.
- Ingredients are held in solution.
- Molasses based to supply sugars which stimulates appetite and improves urea utilisation.
- Flows at temperatures as low as -10°C.
- Contains a blend of Inorganic and Organic Minerals for improved availability and rumen bacterial health.
- Rain safe.

Molafos 20 Benefits

- Palatable and accepted by stock on all country types.
- Controllable intake and cost allows for a budget to be compiled for entire supplement program at commencement.
- Suitable for all types of cattle sheep and goats regardless of body condition.
- Encourages stock to forage further and less selectively by promoting rumen bacteria function, ensuring enhanced forage utilisation, increased feed intake and digestion.
- Maintenance levels of phosphorus supports reproductive efficiency enabling conception rates to be maintained on dry feed.
- Ultimate convenience with ease of use. Minimal labour required with flexibility in application.

Directions for Use

- Pour into open troughs and allow cattle and sheep free access.
- Feed out 3 day's supply and do not refill until the 4th day.
- Once intake has stabilised feed out 7 day's supply and do not refill until the 8th day.
- Stock may need to be supplemented with salt (especially sheep) for 1 week to appease any salt craving.
- Do not feed to starving or thirsty stock.
- Locate feeding stations away from water to reduce intakes and encourage grazing out.

Intakes – These products can be fed directly to livestock at recommended feeding rates.

Weaners: 0.5 to 1 kilogram / head / day

Adult Cattle: 1 to 2 kilograms / head / day

Sheep and Goats: 100 to 300 grams / head / day

1 litre Molafos = 1.32 kilograms

Molafos 20 – Analysis as Fed

Minimum Dry Matter	68%	Minimum Sulphur (S)	1.7%
Energy ME (Dry Matter)	10.0Mj/kg DM	Minimum Copper (Cu)	12mg/kg
Minimum Total Crude Protein	20.0%	Minimum Organic Copper (Cu)	6.3mg/kg
Minimum Crude Protein	3.0%	Minimum Cobalt (Co)	1.5mg/kg
Minimum Equiv Crude Protein	17%	Minimum Iodine (I)	10mg/kg
Maximum Urea	3.5%	Minimum Zinc (Zn)	300mg/kg
Minimum Calcium (Ca)	0.7%	Minimum Organic Zinc (Zn)	150mg/kg
Minimum Phosphorus (P)	0.5%	Minimum Manganese (Mn)	100mg/kg
Minimum Magnesium (Mg)	0.2%	Min Organic Manganese (Mn)	50mg/kg
Maximum Salt (NaCl)	2.5%	Minimum Selenium (Se)	2.2mg/kg

Available Options – Monensin, Lasalocid, Flavophospholipol & Elevated Phosphorus

WARNING

This product must be used in accordance with labeled directions. You must observe all directions, warnings and precautions noted in the instructions.

This product contains Urea. Urea can be toxic to Cattle and Sheep at levels as low as 0.25g of urea per kilogram of live weight. Livestock should be introduced to urea gradually. Avoid feeding urea to starving or thirsty livestock. Always ensure an adequate supply of forage and fresh water.

All medicated liquid supplements should be thoroughly agitated before use, either through mechanical mixing or recirculation on a daily basis.

Sodium Monensin is toxic to all Equines and Canines and should never be fed to these species.

Sodium Monensin and Lasalocid can be toxic to cattle and sheep and can be fatal if not fed in accordance with the instructions for use for this product.
